

How do Europeans spend their time ?

A D3.js visualization tool

What is our dataset ?

2010 survey on European citizens.

Basic question : How much time do you spend on average on [insert type of activity] per week ?

More than 20 activities, from sleeping  to school homework 

Crucial question : on which subset do we compute the average ? Example with studying

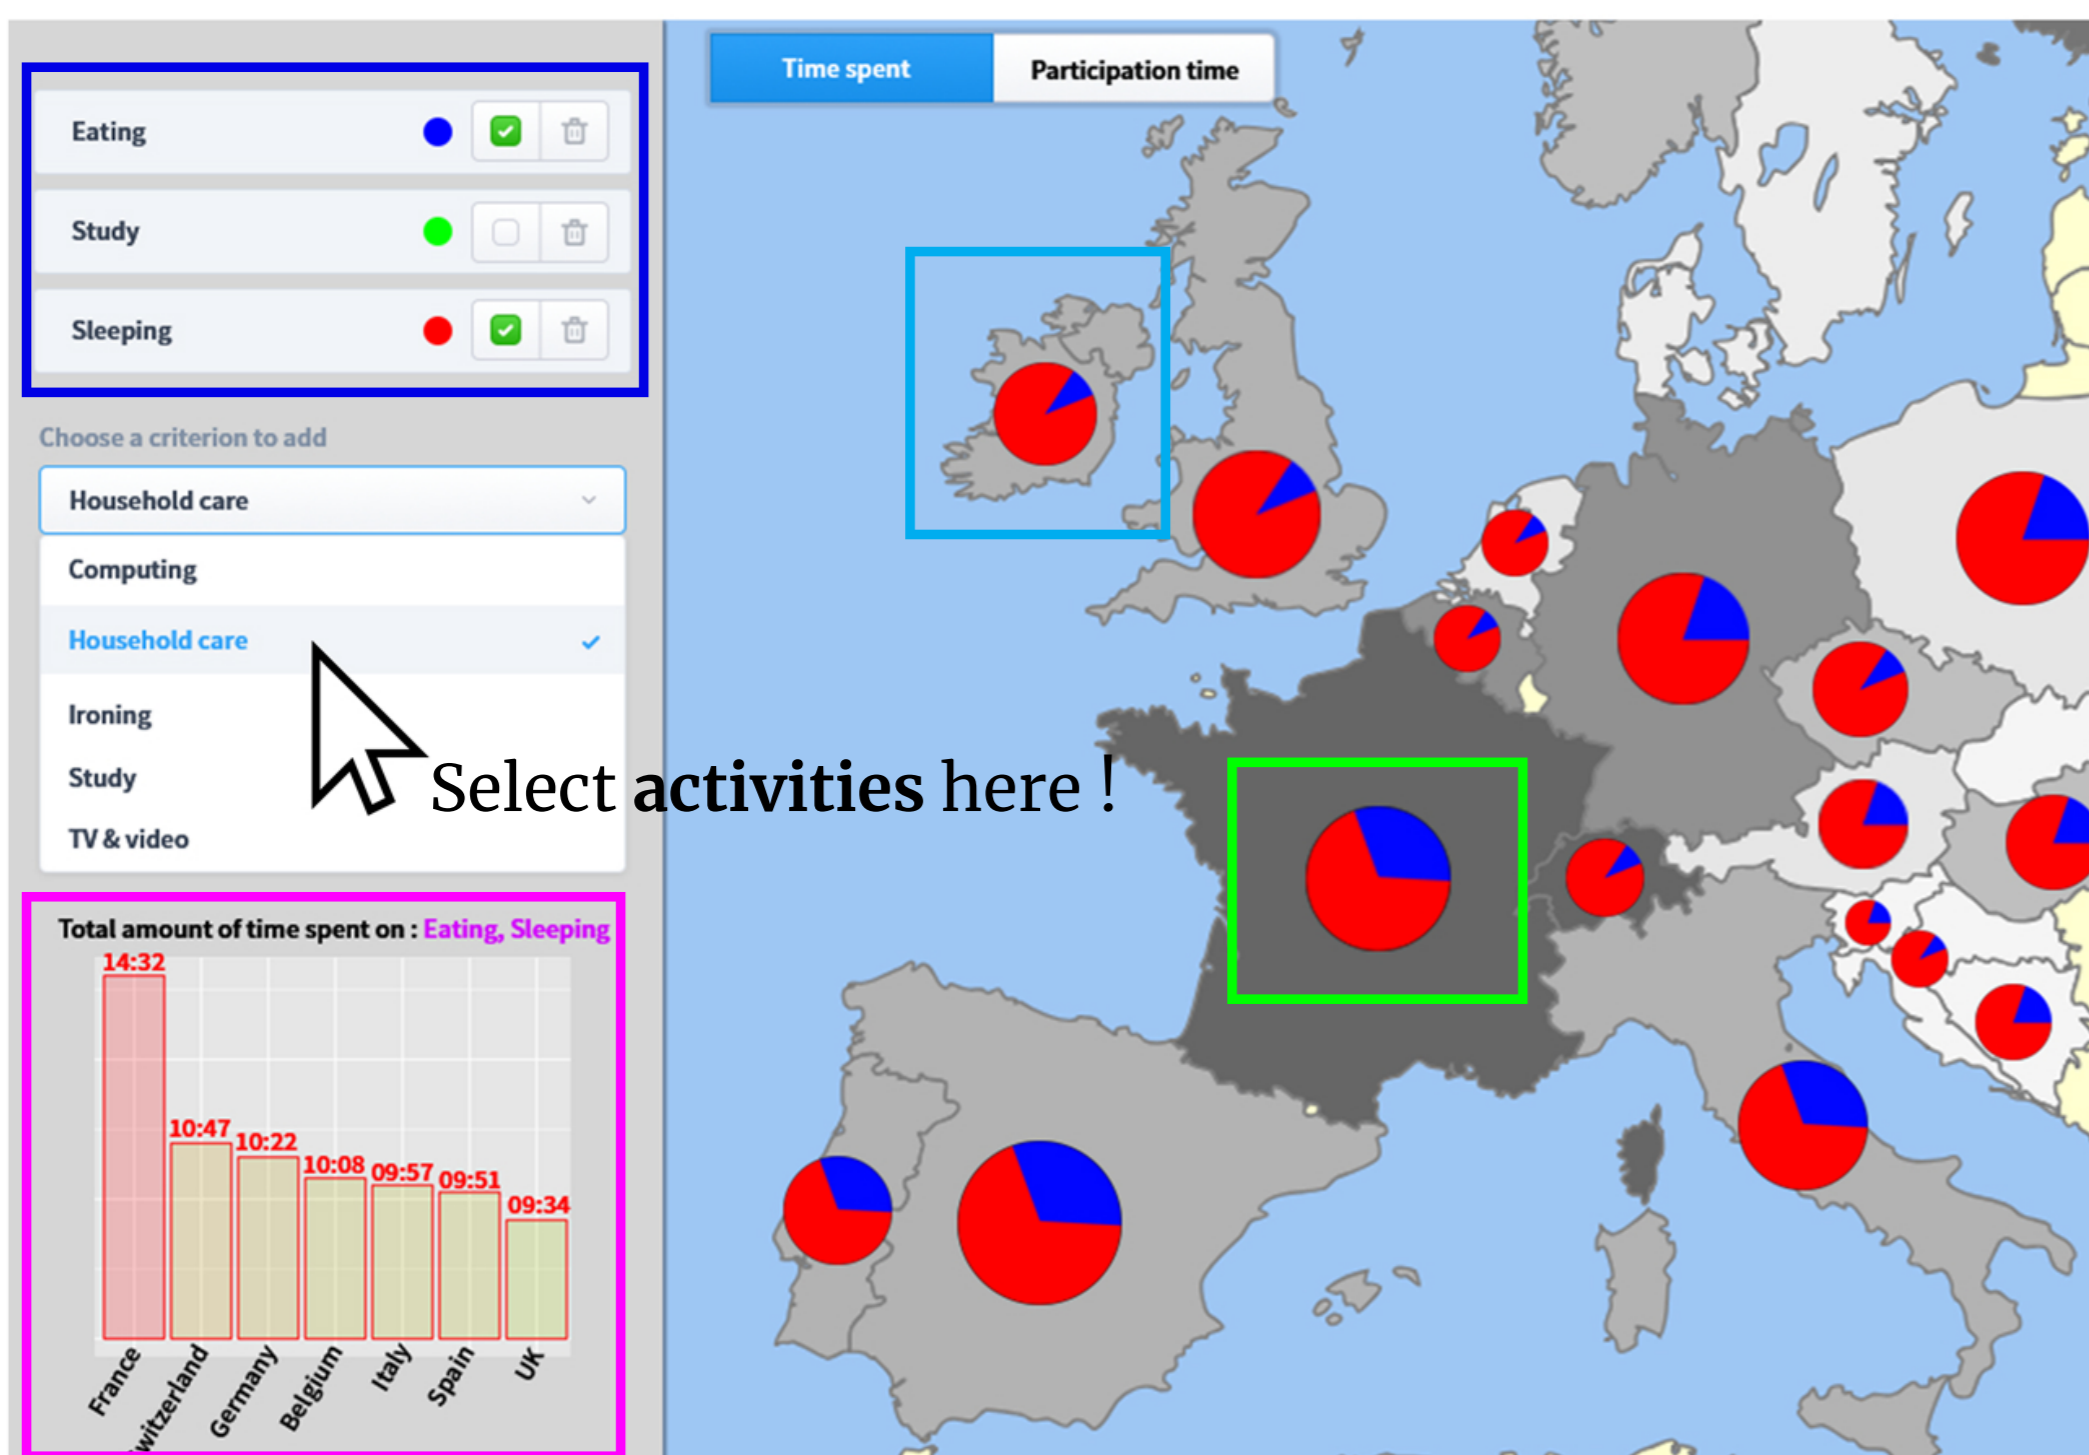

1: Whole country population ?

2: Only students ?

Case 1 : Time spent view

- Coloured items : subset of currently selected activities
- Gray-scale color of countries : total amount of time spent on selected activities
- Pie charts : relative amount of time (%) spent on each selected activity
- Histogram : Total amount of time spent on selected activities per country

Common use

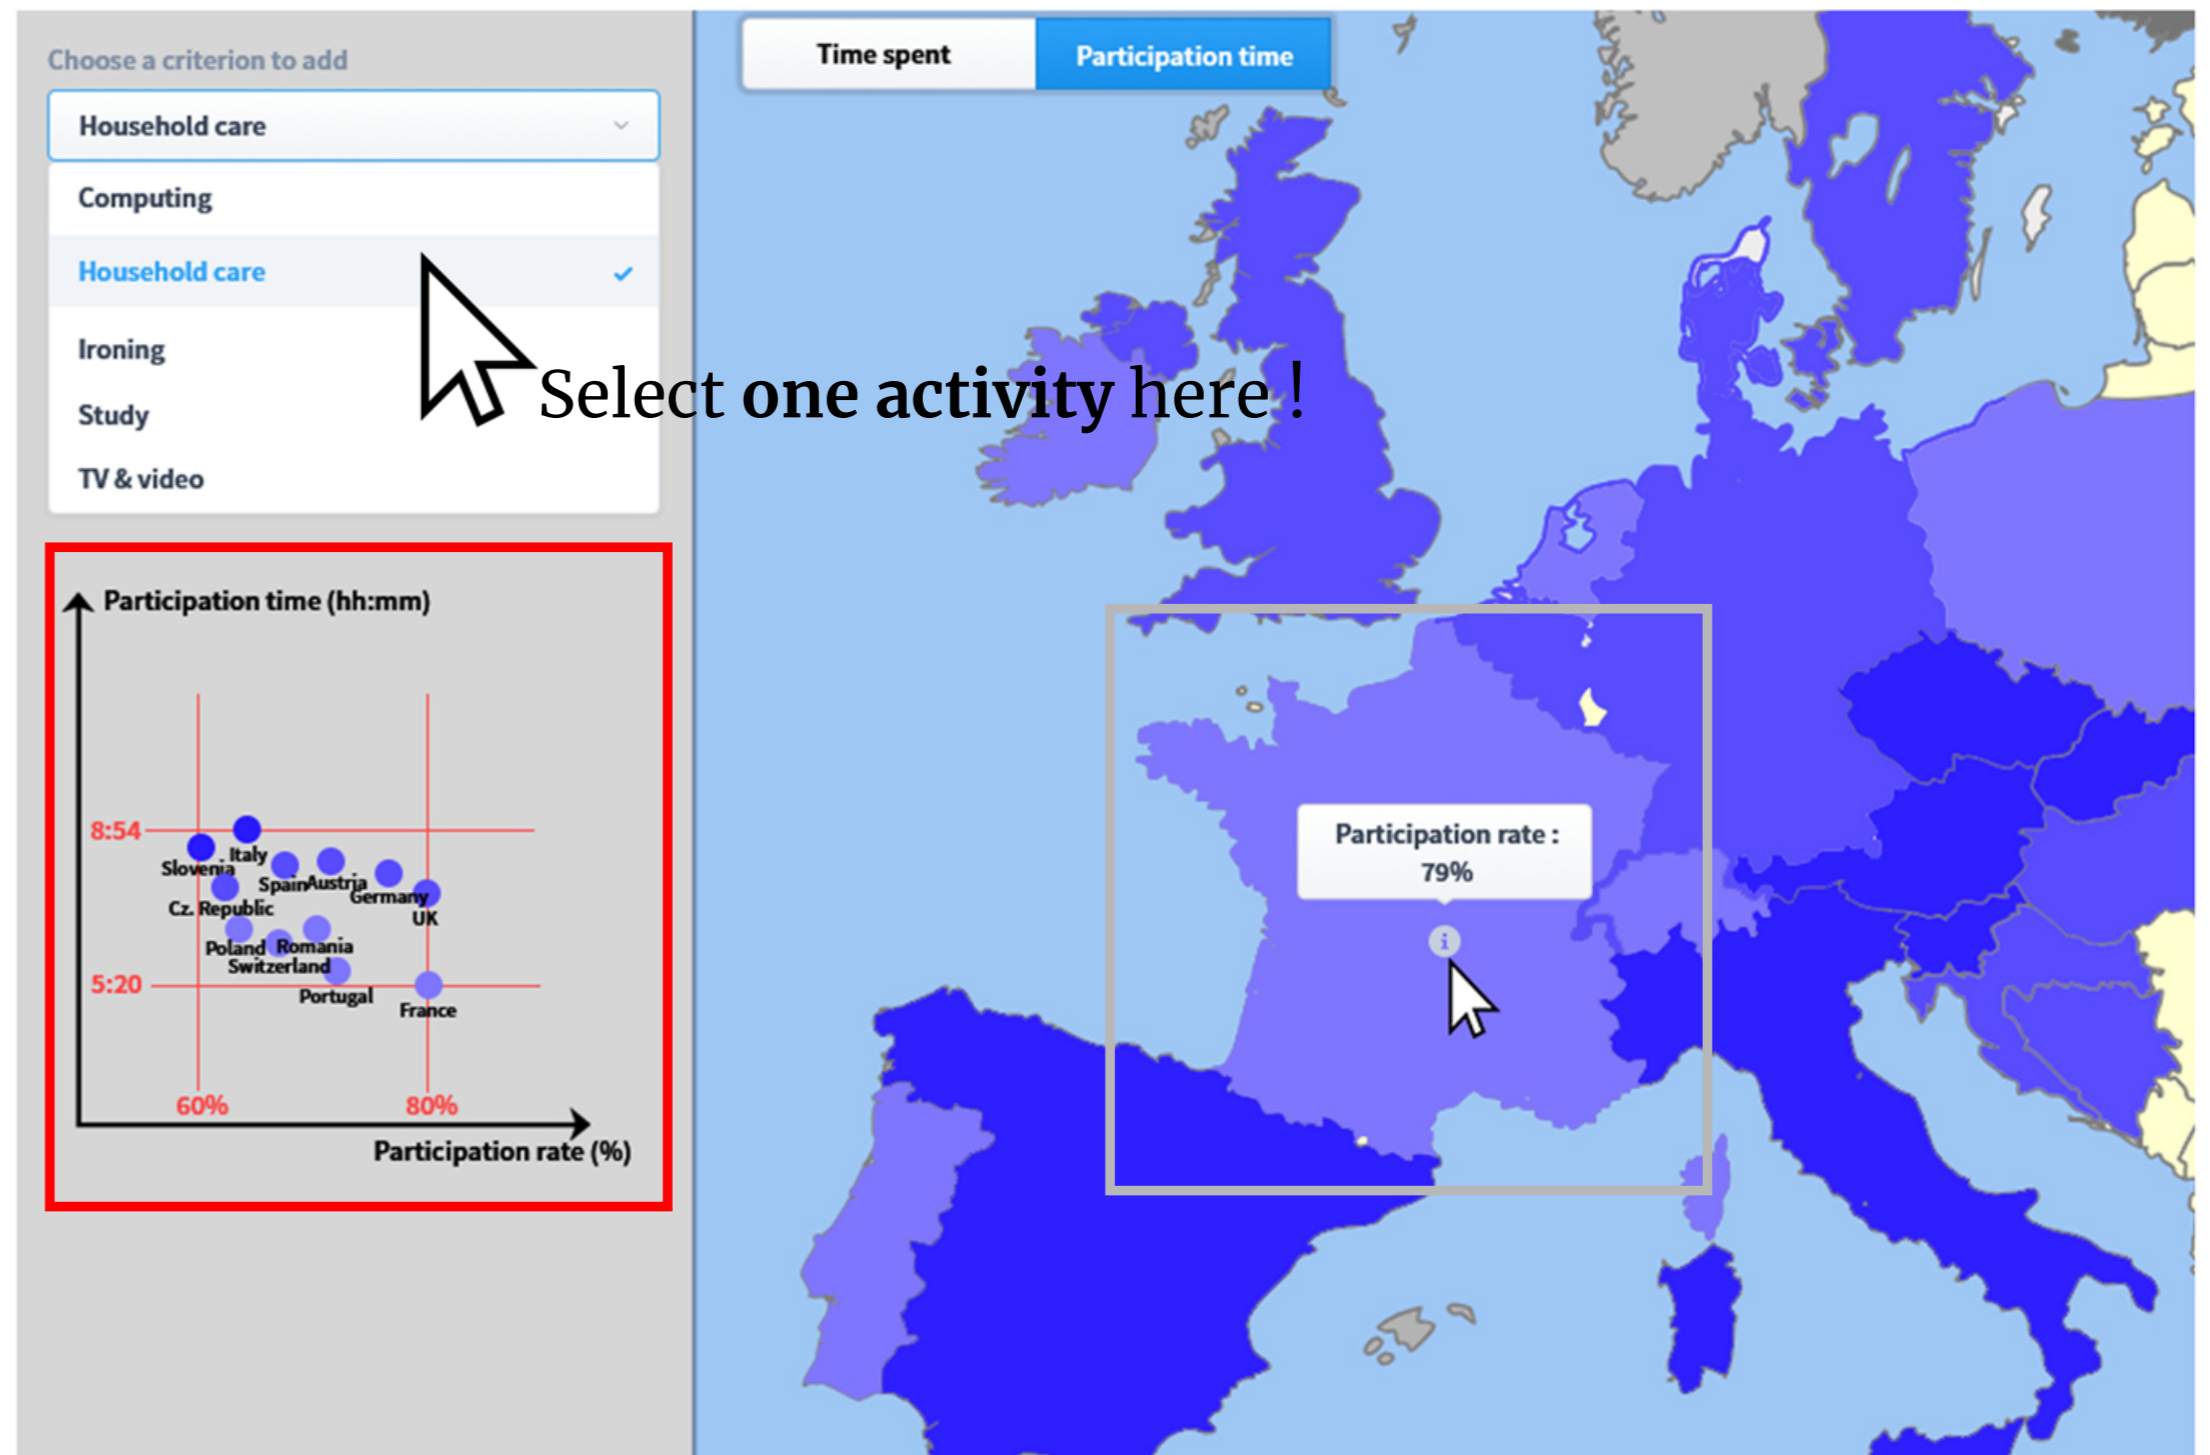

1. Select a set of activities on the dropdown list
2. Associate a specific colour to each one
3. Map and histogram update automatically

Examples of use cases

Is there a 50/50 share between time spent sleeping and for personal care in Germany ?

Which countries spend the biggest amount of time eating ?

Case 2 : Participation time view

- Blue-scale colour of countries : participation time on selected activity
- Scatter-plot chart : 2-dimensional graph with participation time associated with participation rate (%) within the population

Common use

1. Select a specific activity on the dropdown list
2. Map and histogram update automatically

Examples of use cases

Which countries have the most hard-working students in terms of time spent on homework ?

Characterizing household care across European countries :
Participation rate tells about distribution of tasks
Participation time tells about dedication

Interest regarding to Time Spent view

Time spent = Participation time × Participation rate
Gives insight on the two quantities independently

Who are potential users ?

Sociologists working on traditions of European countries

Economists trying to understand average behaviours of consumption in European countries
